

Sales Performance and Revenue Leakage Analysis Using SQL

Introduction

This project analyzed sales performance, customer orders, and revenue leakage using SQL. The dataset was imported into Microsoft SQL Server and explored using SQL queries to identify sales trends, top-performing products, referral channel performance, and unrealized revenue from cancelled, pending, and returned orders. The analysis aimed to transform raw transactional data into meaningful business insights that can support better operational and revenue decisions.

Database Creation and Data Import Process

The screenshot displays the Microsoft SQL Server Enterprise Edition interface. The Object Explorer on the left shows the server structure, including Databases, Security, Server Objects, Replication, Always On High Availability, Management, Integration Services Catalogs, SQL Server Agent, and XEvent Profiler. The main window shows the SQL Server Enterprise Edition console with the following SQL script:

```
1 CREATE DATABASE Decodelabs;
2
3 CREATE TABLE SalesData (
4     OrderID VARCHAR(20) PRIMARY KEY,
5     OrderDate DATE,
6     CustomerID VARCHAR(20),
7     Product VARCHAR(50),
8     Quantity INT,
9     UnitPrice DECIMAL(10,2),
10    ShippingAddress VARCHAR(100),
11    PaymentMethod VARCHAR(30),
12    OrderStatus VARCHAR(30),
13    TrackingNumber VARCHAR(30),
14    ItemsInCart INT,
15    CouponCode VARCHAR(30),
16    ReferralSource VARCHAR(30),
17    TotalPrice DECIMAL(10,2)
18 );
19
20 BULK INSERT SalesData
21 FROM 'C:\SQL_Data\DecodeLab Dataset for SQL.csv'
22 WITH (
23     FORMAT = 'CSV',
24     CODEPAGE = '65001',
25     FIRSTROW = 2
26 );
27
28 SELECT * FROM SalesData;
```

The Results pane at the bottom shows the output of the query, displaying 15 rows of data. The columns are: OrderID, OrderDate, CustomerID, Product, Quantity, UnitPrice, ShippingAddress, PaymentMethod, OrderStatus, TrackingNumber, ItemsInCart, CouponCode, and ReferralSource.

	OrderID	OrderDate	CustomerID	Product	Quantity	UnitPrice	ShippingAddress	PaymentMethod	OrderStatus	TrackingNumber	ItemsInCart	CouponCode	ReferralSource
1	ORD200000	2023-01-04	C72649	Monitor	5	570.62	928 Main St	Debit Card	Shipped	TRK37947903	7	SAVE10	Instagram

Query Included:

- ❖ Database Creation
- ❖ Table Creation
- ❖ CSV Data Import using BULK INSERT
- ❖ Initial Data Validation

Business / Technical Summary:

- ❖ A SQL database named **Decodelabs** was successfully created to store and analyze sales transaction data.
- ❖ The SalesData table was designed with appropriate data types such as VARCHAR, INT, DATE, and DECIMAL to ensure proper storage and analysis of sales records
- ❖ The dataset was imported successfully from a CSV file using the BULK INSERT command.
- ❖ Initial validation confirmed that the sales records were loaded correctly and ready for further business analysis.

Total Sales, Orders, and Revenue Statistics

The screenshot displays the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure for 'DESKTOP-7V50HF2 (SQL Server 16...)' with folders for Databases, Security, Server Objects, Replication, Always On High Availability, Management, Integration Services Catalogs, SQL Server Agent, and XEvent Profiler. The central query window shows a SQL query executed in the 'Decodelabs SQL Pro...eva_almighty (51)' session. The query calculates aggregate statistics for the 'SalesData' table. The results pane at the bottom shows a single row of data with the following values:

	TotalSales	TotalOrders	AverageSales	MinimumSale	MaximumSale
1	1264761.96	3535	1053.97	11.39	3456.40

Business Insight:

The business generated approximately **\$1.26 million** in total sales revenue from **3,535 units sold**. Average sales per transaction were about **\$1,054**, while the highest single transaction reached **\$3,456**, indicating the presence of some high-value customer purchases.

Gross Sales by Products & Referral Source

The screenshot displays the SQL Server Enterprise Manager interface. The left pane shows the 'Object Explorer' with the 'DESKTOP-7V5OHF2 (SQL Server 16)' instance expanded. The right pane shows the 'Decodelabs SQL Pro...eva_almighty (51))' query window. The window contains two SQL queries. The first query, '---Gross Sales by Products', is a SELECT statement that retrieves the product name and the sum of total prices, grouped by product and ordered by gross sales in descending order. The second query, '---Sales by Referral Source', is a SELECT statement that retrieves the referral source and the sum of total prices, grouped by referral source and ordered by gross sales in descending order. Below the queries, the 'Results' tab is active, showing two tables of data. The first table, 'Gross Sales by Products', lists seven products: Chair, Printer, Laptop, Tablet, Monitor, Desk, and Phone, with their respective gross sales values. The second table, 'Sales by Referral Source', lists five referral sources: Instagram, Email, Google, Facebook, and Referral, with their respective gross sales values.

```
40 ---Gross Sales by Products
41 SELECT
42     Product,
43     SUM(TotalPrice) AS GrossSales
44 FROM SalesData
45 GROUP BY Product
46 ORDER BY GrossSales DESC;
47
48 ---Sales by Referral Source
49 SELECT ReferralSource,
50     SUM(TotalPrice) AS Gross_Sales
51 FROM SalesData
52 GROUP BY ReferralSource
53 ORDER BY Gross_Sales DESC;
```

	Product	GrossSales
1	Chair	195620.11
2	Printer	195612.61
3	Laptop	192126.56
4	Tablet	186568.95
5	Monitor	175651.41
6	Desk	167459.93
7	Phone	151722.39

	ReferralSource	Gross_Sales
1	Instagram	275285.45
2	Email	261808.55
3	Google	250441.48
4	Facebook	250410.90
5	Referral	226815.58

Queries Included:

- ❖ Gross Sales by Products & Referral Source

Business Insights:

- ❖ Chair and Printer products generated the highest gross sales revenue, while Phone products recorded the lowest revenue contribution.

- ❖ Instagram and Email were the strongest-performing referral channels, showing higher customer engagement and revenue generation compared to other channels.

Sales by Payment Method & Order Status

The screenshot displays the SQL Server Enterprise Manager interface. The left pane shows the Object Explorer with the server 'DESKTOP-7V5OHF2 (SQL Server 16)' selected. The right pane shows the SQL Query Editor with two queries and their results.

Query 1: Sales by Payment Method

```

55
56 ---SALES BY PAYMENT METHOD
57 SELECT PaymentMethod,
58        SUM(TotalPrice) AS Gross_Sales
59 FROM SalesData
60 GROUP BY PaymentMethod
61 ORDER BY Gross_Sales DESC;
62
63 ---ORDERS BY STATUS
64 SELECT OrderStatus,
65        COUNT(*) AS TotalOrders,
66        SUM(TotalPrice) AS Gross_Sales
67 FROM SalesData
68 GROUP BY OrderStatus
69 ORDER BY Gross_Sales DESC;
70
71
72
73
74

```

Results for Query 1:

	PaymentMethod	Gross_Sales
1	Credit Card	263847.63
2	Online	262442.94
3	Cash	259786.29
4	Gift Card	246323.92
5	Debit Card	232361.18

Results for Query 2:

	OrderStatus	TotalOrders	Gross_Sales
1	Cancelled	250	276396.21
2	Pending	237	256328.15
3	Shipped	235	246159.58
4	Returned	247	243277.70
5	Delivered	231	242600.32

Queries Included:

- ❖ Revenue by Payment Method & Revenue by Order Status

Business Insights:

- ❖ Credit Card and Online payments generated the highest sales revenue.

- ❖ Cancelled orders recorded the highest unrealized revenue, indicating revenue leakage.
- ❖ Delivered orders generated the lowest revenue share compared to cancelled and pending orders.

Quantity Sold and Unrealized Sales Analysis

The screenshot displays the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure for 'DESKTOP-7V5OHF2 (SQL Server 16)'. The central pane shows a SQL query titled 'Decodelabs SQL Pro...eva_almighty (51))' with the following code:

```

71
72 ---QUANTITY SOLD BY PRODUCTS
73 SELECT Product,
74        SUM(Quantity) QuantitySold
75 FROM SalesData
76 GROUP BY Product
77 ORDER BY QuantitySold DESC;
78
79 ---REVENUE LEAKAGE ANALYSIS
80
81 ---Unrealised Sales Analysis
82 SELECT
83        ISNULL(Product, 'Grand Total') AS Product,
84        SUM(TotalPrice) Unrealised_Sales
85 FROM SalesData
86 WHERE OrderStatus IN ('Cancelled', 'Returned', 'Pending')
87 GROUP BY ROLLUP(Product);
88

```

Below the query editor, the 'Results' tab shows two tables. The first table, 'Quantity Sold by Products', lists products and their total quantities sold. The second table, 'Unrealized Sales Analysis', lists products and their unrealized sales amounts, including a 'Grand Total' row.

Product	QuantitySold
1 Chair	562
2 Printer	542
3 Laptop	535
4 Desk	508
5 Tablet	497
6 Monitor	480
7 Phone	411

Product	Unrealised_Sales
1 Chair	123803.84
2 Desk	109809.26
3 Laptop	111174.90
4 Monitor	108726.97
5 Phone	89380.34
6 Printer	113160.47
7 Tablet	119946.28
8 Grand Total	776002.06

Queries Included:

- ❖ Quantity Sold by Products
- ❖ Unrealized Sales Analysis (Cancelled, Returned, and Pending Orders)

Business Insights:

- ❖ Chair products recorded the highest quantity sold (562 units), while Phone products recorded the lowest sales volume (411 units).
- ❖ Chair products also generated the highest unrealized sales value (\$123.8k), followed closely by Tablet and Printer products.
- ❖ Total unrealized sales reached approximately \$776k, showing significant revenue leakage from cancelled, returned, and pending orders.
- ❖ Products with high sales volume also experienced high unrealized revenue, suggesting challenges in order completion and customer conversion.

Revenue Leakage Analysis by Product

The screenshot displays the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure for 'DESKTOP-7V5OHF2 (SQL Server 16...'. The central query window shows a T-SQL query to identify pending orders and calculate their total sales value by product.

```
106 ---Pending Orders
107 SELECT
108     ISNULL(Product, 'Grand Total') AS Product,
109     SUM(TotalPrice) AS Pending_Sales
110 FROM SalesData
111 WHERE OrderStatus = 'Pending'
112 GROUP BY ROLLUP(Product);
113
```

The Results pane at the bottom shows the output of the query as a table with two columns: Product and Pending_Sales.

	Product	Pending_Sales
1	Chair	48504.70
2	Desk	41390.08
3	Laptop	27758.88
4	Monitor	31144.93
5	Phone	32192.88
6	Printer	38546.22
7	Tablet	36790.46
8	Grand Total	256328.15

The screenshot displays the Microsoft SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure for 'DESKTOP-7V50HF2 (SQL Server 16)'. The central query window shows a SQL query with line numbers 89 to 105. The query consists of two parts: one for 'Cancelled Sales' and another for 'Returned Sales'. Both parts use a ROLLUP function to calculate the total price for each product and a grand total. The results are displayed in two tables below the query window.

Query:

```

89  ---Cancelled Sales
90
91  SELECT
92      ISNULL(Product, 'Grand Total') AS Product,
93      SUM(TotalPrice) AS Cancelled_Sales
94  FROM SalesData
95  WHERE OrderStatus = 'Cancelled'
96  GROUP BY ROLLUP(Product);
97
98  ---Returned Sales
99  SELECT
100     ISNULL(Product, 'Grand Total') AS Product,
101     SUM(TotalPrice) AS Returned_Sales
102  FROM SalesData
103  WHERE OrderStatus = 'Returned'
104  GROUP BY ROLLUP(Product);
105

```

Cancelled Sales Results:

Product	Cancelled_Sales
1 Chair	48660.98
2 Desk	39587.69
3 Laptop	43761.72
4 Monitor	37057.44
5 Phone	28023.26
6 Printer	38675.16
7 Tablet	40629.96
8 Grand Total	276396.21

Returned Sales Results:

Product	Returned_Sales
1 Chair	26638.16
2 Desk	28831.49
3 Laptop	39654.30
4 Monitor	40524.60
5 Phone	29164.20
6 Printer	35939.09
7 Tablet	42525.86
8 Grand Total	243277.70

Queries Included:

- ❖ Cancelled Sales, Pending Sales, & Returned Orders

Business Insights:

- ❖ Chair products recorded the highest cancelled sales (**\$48.7k**), while Tablet products generated the highest returned sales (**\$42.5k**). Chair products also had the highest pending sales value (**\$48.5k**).
- ❖ Phone products consistently recorded the lowest unrealized sales across cancelled, returned, and pending orders.
- ❖ Total unrealized revenue remained significantly high across all categories, with cancelled sales at **\$276.4k**, pending sales at **\$256.3k**, and returned sales at **\$243.3k**.
- ❖ The results suggest major revenue leakage caused by incomplete transactions, customer returns, and unresolved pending orders.

Completed Sales Analysis

The screenshot displays the SQL Server Enterprise Manager interface. On the left, the Object Explorer shows the server structure for 'DESKTOP-7V5OHF2 (SQL Server 16...'. The main pane shows a SQL query in the 'Decodelabs SQL Pro...eva_almighty (51))' window. The query is as follows:

```
112  
113 ---Completed Sales  
114 SELECT  
115     ISNULL(Product, 'Grand Total') AS Product,  
116     SUM(TotalPrice) Completed_Sales  
117 FROM SalesData  
118 WHERE OrderStatus IN ('Shipped', 'Delivered')  
119 GROUP BY ROLLUP(Product);  
120  
121
```

Below the query editor, the 'Results' tab is active, showing a table with 8 rows and 2 columns: 'Product' and 'Completed_Sales'.

	Product	Completed_Sales
1	Chair	71816.27
2	Desk	57650.67
3	Laptop	80951.66
4	Monitor	66924.44
5	Phone	62342.05
6	Printer	82452.14
7	Tablet	66622.67
8	Grand Total	488759.90

Query Included:

- Completed Sales by Product

Business Insights:

- ❖ Printer products generated the highest completed sales revenue at **\$82.5k**, followed closely by Laptop at **\$81.0k**.
- ❖ Desk products recorded the lowest completed sales revenue at **\$57.7k**.
- ❖ Total completed sales amounted to **\$488.8k**, showing the value of successfully shipped and delivered orders.
- ❖ This query helps separate actual completed revenue from unrealized sales caused by cancelled, returned, and pending orders.

Revenue Contribution and High-Value Orders Analysis

The screenshot displays the SQL Server Enterprise Manager interface with two queries executed in the 'Decodelabs SQL Pro...eva_almighty (51)' window.

Query 1: Top 5 Highest Orders

```
SELECT TOP 5 OrderID,
Product,
TotalPrice
FROM SalesData
ORDER BY TotalPrice DESC;
```

	OrderID	Product	TotalPrice
1	ORD200789	Tablet	3456.40
2	ORD201122	Monitor	3390.95
3	ORD200632	Laptop	3390.80
4	ORD200469	Chair	3384.90
5	ORD200328	Tablet	3370.20

Query 2: Percentage Revenue Contribution by Product

```
SELECT
Product,
SUM(TotalPrice) AS Revenue,
CAST(ROUND(
(SUM(TotalPrice) * 100.0) /
(SELECT SUM(TotalPrice) FROM SalesData),
2) AS DECIMAL (10,2)) AS Percentage_Contribution
FROM SalesData
GROUP BY Product
ORDER BY Percentage_Contribution DESC;
```

	Product	Revenue	Percentage_Contribution
1	Chair	195620.11	15.47
2	Printer	195612.61	15.47
3	Laptop	192126.56	15.19
4	Tablet	186568.95	14.75
5	Monitor	175651.41	13.89
6	Desk	167459.93	13.24
7	Phone	151722.39	12.00

Queries Included:

- ❖ Top 5 Highest Orders
- ❖ Percentage Revenue Contribution by Product

Business Insights:

- ❖ Tablet products recorded the single highest order value at **\$3,456.40**.
- ❖ Chair and Printer products contributed the highest percentage to total revenue, each accounting for approximately **15.5%** of gross sales.
- ❖ Revenue contribution across products remained relatively balanced, with no single product dominating overall sales performance.
- ❖ Phone products contributed the lowest share of total revenue at approximately **12%**.

Sales Trend and High-Value Customer Analysis

The screenshot displays the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure for 'DESKTOP-7V50HF2 (SQL Server 16...'. The main window shows two queries in the 'Decodelabs SQL Pro...eva_almighty (51))' window.

Query 1: Sales Trend by Year

```
141  
142 ---Sales Trend by Year  
143 SELECT  
144     YEAR(OrderDate) AS SalesYear,  
145     SUM(TotalPrice) AS TotalRevenue  
146 FROM SalesData  
147 GROUP BY YEAR(OrderDate)  
148 ORDER BY SalesYear;
```

Query 2: High Value Customers

```
150 ---High Value Customers  
151 SELECT TOP 10  
152     CustomerID,  
153     SUM(TotalPrice) AS TotalSpent  
154 FROM SalesData  
155 GROUP BY CustomerID  
156 ORDER BY TotalSpent DESC;
```

Results:

Query 1 Results:

	SalesYear	TotalRevenue
1	2023	552643.24
2	2024	480235.87
3	2025	231882.85

Query 2 Results:

	CustomerID	TotalSpent
1	C38840	5723.23
2	C57276	3456.40
3	C67260	3390.80
4	C13877	3384.90
5	C18404	3370.20
6	C16775	3353.75
7	C65986	3352.40
8	C47778	3334.00
9	C59183	3322.55
10	C25276	3313.90

Queries Included:

- ❖ Sales Trend by Year
- ❖ Top 10 High-Value Customers

Business Insights:

- ❖ Sales revenue declined significantly from **2023 (\$552.6k)** to **2025 (\$231.9k)**, indicating a downward sales trend over time.
- ❖ 2023 recorded the strongest revenue performance, while 2025 generated the lowest sales revenue.
- ❖ Customer **C38840** recorded the highest total spending at approximately **\$5.7k**.
- ❖ A small group of customers contributed strongly to overall revenue, highlighting the importance of retaining high-value customers.

High-Value Orders and Top Revenue Products Analysis

The screenshot shows the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure. The central pane displays two SQL queries. The first query, labeled '---Highest Individual Orders', uses a SELECT TOP 10 statement to retrieve OrderID, Product, and TotalPrice from the SalesData table, ordered by TotalPrice in descending order. The second query, labeled '---Products with Revenue Above \$65k', uses a SELECT statement with SUM(TotalPrice) AS Revenue, filtered by OrderStatus ('Delivered', 'Shipped') and grouped by Product, with a HAVING clause for revenue greater than 65000. Below the queries, the Results pane shows two tables. The first table lists the top 10 orders by total price, and the second table lists the top 5 products by total revenue.

```

158  ---Highest Individual Orders
159  SELECT TOP 10
160      OrderID,
161      Product,
162      TotalPrice
163  FROM SalesData
164  ORDER BY TotalPrice DESC;
165
166  ---Products with Revenue Above $65k
167  SELECT Product,
168      SUM(TotalPrice) AS Revenue
169  FROM SalesData
170  WHERE OrderStatus IN ('Delivered', 'Shipped')
171  GROUP BY Product
172  HAVING SUM(TotalPrice) > 65000
173  ORDER BY Revenue DESC;

```

	OrderID	Product	TotalPrice
1	ORD200789	Tablet	3456.40
2	ORD201122	Monitor	3390.95
3	ORD200632	Laptop	3390.80
4	ORD200469	Chair	3384.90
5	ORD200328	Tablet	3370.20
6	ORD200107	Printer	3353.75
7	ORD200326	Laptop	3352.40
8	ORD201065	Printer	3334.00
9	ORD201031	Phone	3322.55
10	ORD200463	Laptop	3313.90

	Product	Revenue
1	Printer	82452.14
2	Laptop	80951.66
3	Chair	71816.27
4	Monitor	66924.44
5	Tablet	66622.67

Queries Included:

- ❖ Highest Individual Orders
- ❖ Products with Revenue Above \$65k

Business Insights:

- Tablet products recorded the single highest individual order value at **\$3,456.40**.
- Printer and Laptop products generated the highest completed revenue, exceeding **\$80k** each.
- Only five products achieved revenue above the **\$65k** benchmark, indicating stronger market demand for selected product categories.
- The analysis highlights high-performing products that contribute significantly to completed sales revenue and business profitability.

Completed vs Unrealized Revenue Analysis

The screenshot displays the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the server structure for 'DESKTOP-7V5OHF2 (SQL Server 16...'. The central pane shows a SQL query titled 'Decodelabs SQL Pro...eva_almighty (51))' with the following code:

```

177 ---Completed Vs Unrealized Sales Comparison
178 SELECT
179     CASE
180         WHEN OrderStatus IN ('Shipped', 'Delivered')
181         THEN 'Completed'
182         ELSE 'Unrealized'
183     END AS SalesType,
184     SUM(TotalPrice) AS Revenue
185 FROM SalesData
186 GROUP BY
187     CASE
188         WHEN OrderStatus IN ('Shipped', 'Delivered')
189         THEN 'Completed'
190         ELSE 'Unrealized'
191     END;
192
  
```

Below the query editor, the 'Results' tab is active, showing the following data:

	SalesType	Revenue
1	Unrealized	776002.06
2	Completed	488759.90

Query Included:

- ❖ Completed vs Unrealized Sales Comparison

Business Insights:

- ❖ Unrealized sales totaled approximately **\$776k**, significantly exceeding completed sales of **\$488.8k**.
- ❖ More revenue was lost through cancelled, returned, and pending orders than was successfully completed.
- ❖ The large revenue gap suggests major inefficiencies in order fulfillment, customer conversion, or product returns management.
- ❖ Reducing unrealized sales could significantly improve overall business profitability and realized revenue performance.

Conclusion

This project used SQL to analyze sales performance, customer purchasing behaviour, and revenue leakage within the dataset. The analysis identified key insights on product performance, referral channel effectiveness, customer spending patterns, and unrealized revenue from cancelled, returned, and pending orders.

The findings showed that unrealized revenue exceeded completed sales revenue, highlighting significant operational and order fulfillment challenges. Products such as Chair, Printer, and Laptop generated strong revenue performance, while Instagram and Email proved to be the most effective referral channels for customer acquisition.

To improve overall business performance, the organization should focus on reducing cancelled and pending orders, improving order fulfillment processes, and strengthening customer retention strategies to minimize revenue leakage and increase completed sales revenue.
